Horizontal tube • Wet base steel boiler

HIGH EFFICIENCY

SATURN

HOT WATER OIL-FIRED BOILER

Saturn not available in USA

Deciding on a HIGH EFFICIENCY heating system has never been more important. Kerr Energy Systems can help minimize energy use, cut greenhouse gas emissions and save money at home.

WE'VE GOT THE BEST LITTLE STEEL BOILERS IN THE BUSINESS!

Small in size, big in performance, the Kerr Comet and Kerr Saturn ENERGY STAR® qualified boilers are ideal for either new home construction, heating system upgrades, electric conversion, or in-floor heating. Whatever your needs, Kerr has the right product for the job... even in tight quarters.

The **COMET** incorporates our horizontal fire-tube design, ensuring greater comfort and higher efficiencies, helping you save money year after year. The Comet can be used in conjunction with an indirect water heater or an optional domestic hot water coil. Ask your installer which option best suits your needs.

The **SATURN** is an economical, chambered unit that provides worry-free operation. The same options as on the Comet are offered for domestic hot water. Dependable and reliable, this boiler ensures years of comfort at an affordable price.

Kerr stands behind every product it sells and carries one of the best warranties in the business.
